Kromasil EternityShell
Columns with solid-core particles
for harsh conditions
More options with a wider range of pH conditions

Kromasil EternityShell columns are a further expansion of the Kromasil analytical portfolio. Kromasil EternityShell columns have been designed for users who expect to perform separations between pH 1 and 12 and look for fast separations using solid-core technology.

Kromasil EternityShell columns

The Kromasil EternityShell columns are based on solid-core particles and used in the analysis of pharmaceutical, clinical, environmental, food and beverage and industrial samples.

These new columns are packed with 2.5 µm solid-core particles. Kromasil EternityShell are aimed for fast separations similarly to the already existent Kromasil EternityXT columns with 1.8 and 2.5 µm particles.

Extended pH range

The Kromasil EternityShell C18 columns are robust and stable beyond traditional silica columns. Offering excellent pH flexibility between pH 1 and 12, These EternityShell columns are for users that need to work under an almost full pH range, including acidic conditions but also at tougher high pH for the analysis for bases. The new chromatographic material is endcapped, has a surface area of 110 m²/g and a carbon coverage of 8%, providing a first rate alternative selectivity for reversed phase chromatography.

Work with confidence in a pH range between 1 and 12.
More choices for analysis

Users can now choose from both fully porous and solid-core Kromasil small particle columns to achieve their results. Here the user exploits differences in retention according to the stationary phase characteristics with maintained selectivity. Considering Kromasil EternityShell and EternityXT, with a lower ratio of porous material available for the first one, the interaction between the compounds and the stationary phase is lower, resulting in a quicker elution. When considering Kromasil ClassicShell and EternityShell chromatographic results, the characteristics of each stationary phase combined with the given substances allows the user to tune in the retention time.

Fast separations under harsh conditions

Separation of local anesthetics

Separation of tricyclic drugs
Separation of aromatics on Kromasil EternityShell C18

Conditions
- **Column:** Kromasil EternityShell-2.5-C18 2.1 x 50 mm
- **Eluent:** acetonitrile / water
- **Gradient:** 0 min: 60%, 2 min: 85% acetonitrile
- **Temperature:** ambient
- **Flow rate:** 0.6 ml/min
- **Detection:** UV @ 254 nm
- **Substances:**
  1. toluene, 2. naphthalene, 3. biphenyl, 4. acenaphthene, 5. phenanthrene, 6. anthracene, 7. o-terphenyl, 8. trihylene

The moment you adopt our Kromasil High Performance Concept, you join thousands of chromatographers who share a common goal: to achieve better separations when analyzing or isolating pharmaceuticals or other substances.

Not only will you benefit from our patented silica technology, but you gain a strong partner with a reliable track record in the field of silica products. For the past 70 years, we have pioneered new types of silica. Our long experience in the field of silica chemistry is the secret behind the development of Kromasil, and the success of our Separation Products group. Kromasil is available in bulk and in high-pressure slurry-packed columns. The development, production and marketing of Kromasil are ISO 9001 certified.

Kromasil is a brand of AkzoNobel, a leading global paints and coatings company and a major producer of specialty chemicals, worldwide. Headquartered in Amsterdam, the Netherlands, we have approximately 45,000 people in around 80 countries. We are committed to sustainability and creating everyday essentials to make cities and people’s lives more liveable and inspiring.

Kromasil® is a registered trademark of AkzoNobel in a number of territories in the world.

Part numbers
Kromasil EternityShell is based on 2.5 µm solid-core particles, and is available with C18 derivatization, in 2.1 mm I.D. UHPLC grade columns.
