

## HPLC & UHPLC OEM SYSTEMS

In the following pages you will find replacement components designed specifically for OEM HPLC/UHPLC solvent delivery systems. At Optimize, all components are precision machined to the most exacting standards in the industry. All phases of the manufacturing process are controlled to ensure the highest quality. From the individual matching of check valve ball and seat sets to the proprietary blend of materials in our seals – experience Optimize quality.

**EVERY REPLACEMENT COMPONENT WE OFFER  
IS DESIGNED TO MEET OR EXCEED ORIGINAL  
EQUIPMENT SPECIFICATIONS. GUARANTEED.**

### Optimize and OEM Components

Most instrument manufacturers will insist optimal instrument performance depends on exclusively using components that match their performance specifications. We could not agree more. Every Optimize replacement component is guaranteed to meet or exceed original equipment specifications. For example, several major OEM manufacturers incorporate Optimize components as original equipment on new HPLC and UHPLC instruments. Optimize OEM partners appreciate the positive impact Optimize products have on instrument performance.

### Optimize Innovation

Innovation is our driving force. We offer a comprehensive selection of components for most brands of HPLC systems and are always developing new products to save customers time and money. Should you need a product that is not listed in this catalog, please call us to discuss your fluid handling needs.

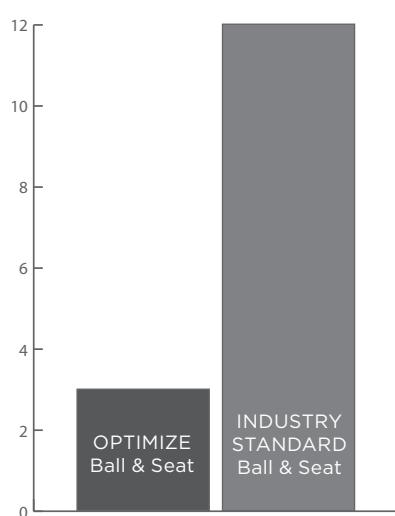

# OPTI-MAX® CHECK VALVES

HIGH to ULTRA PRESSURE  
6Kpsi / 400bar to 20K+psi / 1,400+bar

A properly functioning check valve is virtually unnoticeable. An improperly functioning check valve can lead to a noisy baseline, pressure fluctuations and inconsistent flow. A check valve can have a large impact on the performance of your pump. It is imperative when choosing replacement check valves to select the very best. The OPTI-MAX Check Valve System is the very best. Read on to discover the innovations in our OPTI-MAX Check Valve line.

## CHECK VALVES ARE A CRUCIAL, YET OFTEN OVERLOOKED COMPONENT OF THE HPLC SYSTEM.

Bubbles of nitrogen/  
minute at 90 psi  
which leak from  
ball & seat.

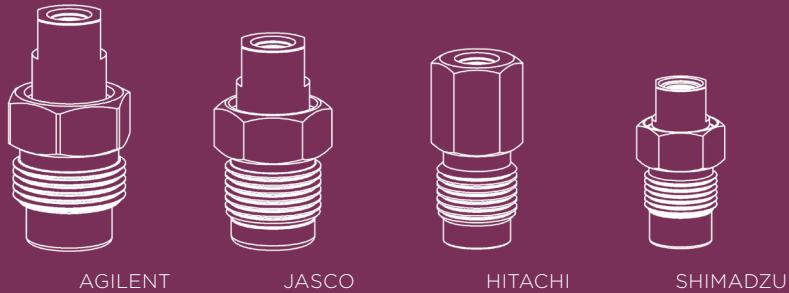

### A BETTER CHECK VALVE

Tighter specifications make a better valve. A check valve can only function effectively if it activates and seals properly in response to the piston cycle. The seating process is fairly simple. The ball lands on the seat and creates a seal. However, there are many factors that contribute to optimal seating. Optimize check valves are designed and engineered to be the most responsive in the industry.

Each ball and seat set is individually matched to ensure a lock-and-key fit. This guarantees 3 bubbles/minute or less in the industry standard nitrogen bubble test. Common acceptable standards are 12 bubbles or less. Optimize check valves minimize the ball travel distance within the check valve. Less travel distance equals quicker seating and more accurate pump metering.

# OPTI-MAX®

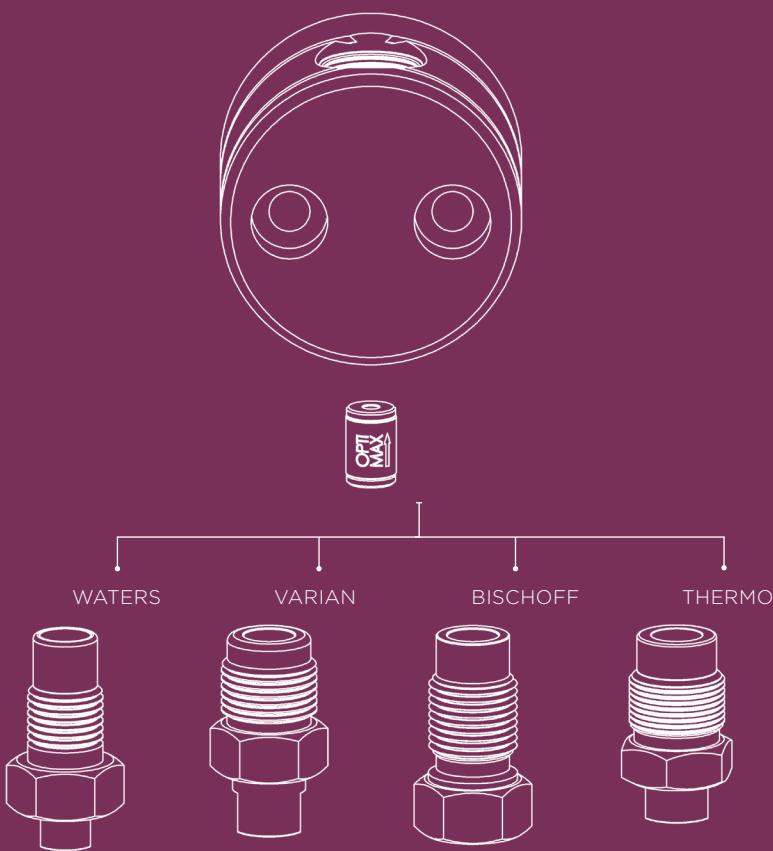

## A UNIVERSAL SOLUTION

A single OPTI-MAX cartridge is interchangeable across multiple pump brands and can function in either the inlet or outlet position.

The same OPTI-MAX cartridge fits into OPTI-MAX housings for pumps manufactured by Waters, Shimadzu, Agilent/HP, and many other OEM solvent delivery systems.

The modular cartridge system allows you to minimize the number of spare check valve cartridges you keep on hand and dramatically reduce the cost of inventory required to cover maintenance needs.

## OPTI-MAX® FREE-TURN® HOUSING

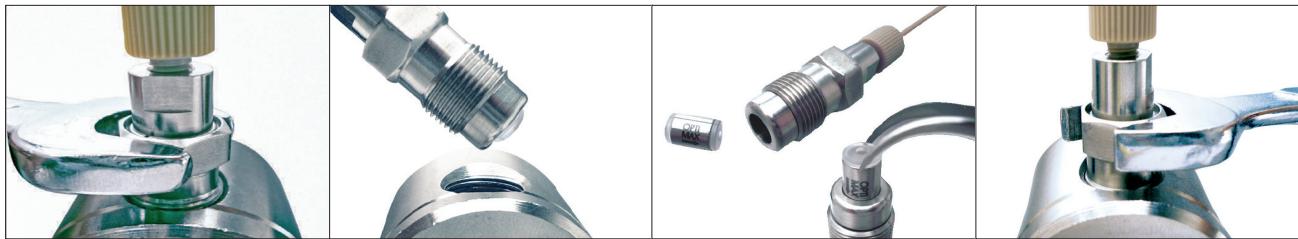

Optimize was the first in the industry to introduce the concept of the OPTI-MAX Free-Turn® housing. The thread tightens a check valve housing into the pump head and spins independently from the inner housing body. The check valve can then be changed without disconnecting any tubing. An idea born in efficiency.

Most OPTI-MAX Check Valve housings feature the Free-Turn design. To see if housings are available for your system, look for the Free-Turn logo  .

### OPTI-MAX® FREE-TURN® HOUSINGS

CAN BE REMOVED WITH THE TUBING STILL ATTACHED,  
ACCELERATING CHECK VALVE MAINTENANCE WHILE  
REDUCING FITTING WEAR.

#### FREE-TURN® IN ACTION

Place wrench on the hex nut and turn. The hex nut or thread ring will turn independently of the fitting connection.

Continue to unscrew the thread ring until the entire check valve assembly is removed from the pump head.

Discard old check valve cartridge & replace with new cartridge.

Install entire assembly into pump head.

# OPTI-MAX® MATERIALS

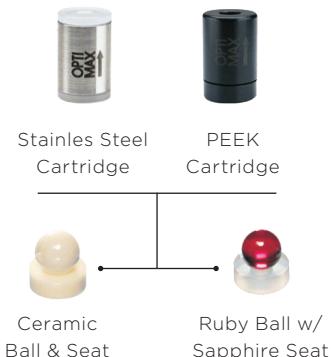

OPTI-MAX cartridges are available in several different sizes and combinations of body and ball/seat materials. All cartridges are manufactured and leak tested to meet the highest performance standards.

## OUR RECOMMENDATION: STAINLESS/CERAMIC

For high mechanical strength, stainless steel cartridges are the best choice. Ceramic ball & seat sets have a higher density, which can make the valve more responsive and help the ball seat faster in lighter solvents.

For biocompatible HPLC systems with nonmetallic flow paths or high percentages of THF, use PEEK cartridges with ceramic balls & seats.

The cartridge body materials listed above are also available with ruby and sapphire ball & seat combinations.

## CARTRIDGE MATERIAL OPTIONS | 2 PACKS

<b>1/32"</b>	<b>10-39-02004</b>	Cartridge fits in all housings using 1/16" and 1/8" cartridge. Only available in PEEK/PPS body with ruby sapphire ball & seat.
--------------	--------------------	--

<b>1/16"</b>	<b>10-46-02004</b>	<b>Recommended:</b> Microbore stainless steel cartridge with ceramic ball & seat

--------------------	--

<b>10-69-02005</b>	PEEK cartridge with ruby ball & sapphire seat
--------------------	---

<b>1/16"</b>	<b>10-76-02004</b>	OPTI-MAX EXP stainless steel cartridge with ceramic ball & seat
--------------	--------------------	---

<b>10-77-02004</b>	OPTI-MAX EXP stainless steel cartridge with ruby ball & sapphire seat
--------------------	---

<b>10-86-02004</b>	OPTI-MAX EXP stainless steel cartridge with double ceramic balls & seats
--------------------	--

We cannot guarantee the OPTI-MAX check valve cartridge will fit in OEM housings. OPTI-MAX cartridges must be used with OPTI-MAX housing for optimal results.

# SEALS & PISTONS

By design, seals and pistons are a consumable part of an HPLC pump and should be replaced on a regular preventative maintenance schedule. To maintain peak performance and avoid unplanned downtime, piston seals should be replaced every three to six months. While sapphire pistons require inspection every six months with yearly or as-needed replacement.

## SEALS

Optimize piston seals are the longest lasting seals on the market. Machined from either of two proprietary polymer blends, UHMW-PE or ITB, Optimize seals provide ultimate high pressure sealing capacity. For mostly aqueous buffered mobile phases, OPTI-SEAL UHMW-polyethylene is the preferred choice. Specially designed to be more resistant to abrasion and wear than standard polyethylene seals, the seals can last up to seven times longer under mostly aqueous conditions. Despite the UHMW-PE's durability, the material has a coefficient of friction approaching that of PTFE. The homogenous polymer nature leads to less shedding. When it does occur, a larger, more fibrous particle is produced and is easily caught by a filter frit.

PTFE-based Improved Blend (ITB) seals are a superior choice for applications with elevated temperatures, high organic content, or when the broadest possible solvent compatibility is required. ITB seals tend to be softer than those made from UHMW-PE, making the seals more forgiving at high pressures where piston side-loading or misalignment may occur. This softer nature also leads to more shedding. However, the ITB proprietary blend is designed to shed particles that are large enough to be caught at the surface of a standard 2µm frit and not embed within the frit.

## PISTONS

Optimize sapphire pistons offer optimal concentricity and resistance to wear. Each sapphire rod is specifically cut in relation to the grain of the crystal lattice, yielding maximum resistance to breakage with superior wear characteristics. Attachment of the rod to the piston ferrule is performed through a proprietary process ensuring concentricity. This is an important and often overlooked procedure that has a direct effect on seal lifetime.

# SEAL FORM TOOL KIT

Installing a piston seal can be a tricky undertaking. A relatively small seal must fit into the seal cavity in such a way to ensure the seal is inserted evenly without distortion or damage. The Optimize Seal Forming/Insertion Tool Kit is specifically designed for easy and successful installation.

The kit contains three tools to accommodate all HPLC piston seals. One end has a beveled cavity for seal forming while the other end is an insertion support for perfect seal installation. Each kit contains instructions for maximizing seal life and a Solvent Compatibility Guide to aid in seal material selection.

## THE KIT INCLUDES THREE SIZES ASSURING THE PERFECT SEAL FIT EVERY TIME

Forming cavities are available in three different sizes allowing the user to choose the best tool for seal installation.

The piston seal is formed by pressing the tool onto the seal jacket.

The seal is then pressed into the pump head seal cavity using the insertion support.

### Seal Forming/Insertion Tools

<b>10-10-02695</b>	Seal Forming/Insertion Tool Kit Includes three Forming/Insertion Tools (Small, Medium, Large), instruction booklet & Solvent Compatibility Guide
<b>10-10-02699</b>	Small Seal Forming/Insertion Tool
<b>10-10-02700</b>	Medium Seal Forming/Insertion Tool
<b>10-10-02701</b>	Large Seal Forming/Insertion Tool

**TIP:** For best performance, always use methanol or isopropanol to presoak piston seals for five to ten minutes prior to installation. Wet all mating surfaces (seal, piston, seal cavity) as the seal is formed and installed.

## OPTI-MAX® CONVERSION KITS

Dionex  
25-58-01242

OPTI-MAX Conversion Kits contain all the check valves necessary for your HPLC pump. Kits are grouped under single part numbers and priced up to 20% off list.

Each kit includes all the OPTI-MAX check valve housings and cartridges needed to convert an HPLC instrument. Simply find your HPLC pump/brand model in the list below and use the conversion kit part number. Each kit includes our recommended stainless steel/ceramic OPTI-MAX cartridges. Please note, OPTI-MAX PEEK cartridges are supplied for listed biocompatible systems. It is also possible to substitute an alternate cartridge material at the same kit price.

# AGILENT / HEWLETT PACKARD

Optimize has developed the new OPTI-MAX 600 bar Active Inlet replacement cartridge (AIV). The AIV is comparable in price to the 400 bar active inlet cartridge offered by Agilent.

The OPTI-MAX 600 bar AIV utilizes the proprietary OPTI-MAX technology with wetted materials of 316 SS, PEEK and zirconia (ceramic) for complete compatibility and reliability in both 400 bar and 600 bar applications. The OPTI-MAX Zirconia ball/seat sets are the best in the industry and are individually tested to perform at 3 bubbles or less in the industry-standard 90 psi nitrogen leak test. The OPTI-MAX AIV withstands well over 20,000 psi as an assembled cartridge. Ball travel is minimized allowing the cartridge to exhibit extremely low pulsation in both 600 bar and 400 bar applications. The rugged 316 stainless steel OPTI-MAX AIV cartridge body is easily inserted and tightened for the higher pressure application of 600 bar instruments. The cartridge is completely compatible with both 600 and 400 bar instruments.

By choosing the OPTI-MAX 600 bar AIV cartridge, laboratories with multiple Agilent 400 bar and 600 bar instruments need only purchase and inventory one OPTI-MAX AIV cartridge. Maintenance and repair become much simpler and less costly.

Please note: this cartridge is not compatible with valve body 0491-0131

## OPTI-MAX® 600 BAR AIV CHECK VALVE CARTRIDGE FOR AGILENT SYSTEMS

### Part #                    OEM #

**27-38-04713**            G1312-60020, 5062-8562

### Compatible Pumps

- Agilent 1100 Quaternary Pump (G1311A)
- Agilent 1100 Binary Pump (G1312A)
- Agilent 1100 Capillary Pump (G1376A)
- Agilent 1200 Isocratic Pump (G1310A)
- Agilent 1200 Binary Pump (G1312C)
- Agilent 1260 Infinity Binary Pump (G1312B)
- Agilent 1260 Infinity Isocratic Pump (G1310B)
- Agilent 1260 Infinity Quaternary Pump (G1311B)
- Agilent 1260 Infinity Quaternary Pump VL (G1311C)

### Key Features

- Wetted materials: 316 SS, PEEK and zirconia (ceramic)
- Compatible with both 400 bar and 600 bar applications
- Rated to 20,000+ psi
- OPTI-MAX Zirconia (ceramic) ball/seat set individually tested
- Reduces inventory
- Comparable in price to the standard 400 bar Agilent replacement cartridge
